# SINEAX M561 / M562 / M563 <br> with 1,2 resp. 3 analog outputs <br> Programmable Multi-Transducer for Industry 

## for the measurement of electrical variables in heavycurrent power system

## Application

SINEAX M 561/M 562/M 563 (Fig.1) is a programmable transducer with a RS 232 C interface. M 561 supervises 1 variable (input) which is available on an analog output signal. Input and output are electrically isolated. M 562 resp. M 563 measure 2 resp. 3 variables simultaneously and generate $\mathbf{2}$ resp. $\mathbf{3}$ electrically isolated analog output signals.
The transducers are also equipped with an RS 232 serial interface to which a PC with the corresponding software can be connected for programming or accessing and executing useful ancillary functions.
The usual methods of connection, the types of measured variables, their ratings, the transfer characteristic for each output etc. are the main parameters that can be programmed.
The ancillary functions include displaying, recording and evaluation of measurements on a PC, the simulation of the outputs for test purposes and a facility for printing nameplates.
The transducer fulfils all the essential requirements and regulations concerning electromagnetic compatibility (EMC) and safety (IEC 1010 resp. EN 61 010). It was developed and is manufactured and tested in strict accordance with the quality assurance standard ISO 9001.

## Features / Benefits

- Simultaneous measurement of several variables of a heavy-current power system

| Measured variables | Nominal input <br> current | Nominal input <br> voltage |
| :--- | :--- | :--- |
| Current, voltage (rms), <br> active/reactive/apparent power <br> cos $\varphi$, sin $\varphi$, power factor |  |  |
| RMS value of the current with wire |  |  |
| setting range (bimetal measuring |  | 57.7 to 400 V |
| function) | 1 to 6 A | (phase-to-neutral) |
| resp. |  |  |
| Slave pointer function for the mea- |  | 100 to 693 V |
| surement of the RMS value IB |  | (phase-to-phase) |
| Frequency |  |  |
| Average value of the currents with |  |  |
| sign of the active power (power |  |  |
| system only) |  |  |

- For all heavy-current power system variables
- Universal analog outputs (programmable)
- Input voltage up to 693 V (phase-to-phase)
- High accuracy: Class 0.2 (U, I) resp. 0.5 (all other quantities)
- Windows software with password protection for programming, data analysis, power system status simulation
- DC-, AC-power pack with wide power supply tolerance / Universal

## Symbols

| Symbols | Meaning |
| :---: | :---: |
| X | Measured variable |
| X0 | Lower limit of the measured variable |
| X1 | Break point of the measured variable |
| X2 | Upper limit of the measured variable |
| Y | Output variable |
| YO | Lower limit of the output variable |
| Y1 | Break point of the output variable |
| Y2 | Upper limit of the output variable |
| Y2 SW | Programmed upper limit of the output variable |
| $\cup$ | Input voltage |
| Ur | Rated value of the input voltage |
| U 12 | Phase-to-phase voltage L1-L2 |
| U 23 | Phase-to-phase voltage L2 - L3 |
| U 31 | Phase-to-phase voltage L3-L1 |
| U1N | Phase-to-neutral voltage $\mathrm{L} 1-\mathrm{N}$ |
| U2N | Phase-to-neutral voltage $\mathrm{L} 2-\mathrm{N}$ |
| U3N | Phase-to-neutral voltage $\mathrm{L} 3-\mathrm{N}$ |
| 1 | Input current |
| 11 | AC current L1 |
| 12 | AC current L2 |
| 13 | AC current L3 |
| Ir | Rated value of the input current |
| IM | Average value of the currents ( $11+12+13$ )/3 |
| IMS | Average value of the currents and sign of the active power (P) |
| IB | RMS value of the current with wire setting range (bimetal measuring function) |
| IBT | Response time for IB |
| BS | Slave pointer function for the measurement of the RMS value IB |
| BST | Response time for BS |
| $\varphi$ | Phase-shift between current and voltage |
| F | Frequency of the input variable |
| Fn | Rated frequency |
| P | Active power of the system P = P1 + P2 + P3 |
| P1 | Active power phase 1 (phase-to-neutral L1 - N) |

| Symbols | Meaning |
| :---: | :---: |
| P2 | Active power phase 2 (phase-to-neutral L2 - N) |
| P3 | Active power phase 3 (phase-to-neutral L3-N) |
| Q | Reactive power of the system $Q=Q 1+Q 2+Q 3$ |
| Q1 | Reactive power phase 1 (phase-to-neutral L1 - N) |
| Q2 | Reactive power phase 2 (phase-to-neutral L2 - N) |
| Q3 | Reactive power phase 3 (phase-to-neutral L3-N) |
| S | Apparent power of the system |
| S1 | Apparent power phase 1 (phase-to-neutral L1 - N) |
| S2 | Apparent power phase 2 (phase-to-neutral L2 - N) |
| S3 | Apparent power phase 3 (phase-to-neutral L3-N) |
| Sr | Rated value of the apparent power of the system |
| PF | Active power factor $\cos \varphi=P / S$ |
| PF1 | Active power factor phase $1 \mathrm{P} 1 / \mathrm{S} 1$ |
| PF2 | Active power factor phase $2 \mathrm{P} 2 / \mathrm{S} 2$ |
| PF3 | Active power factor phase 3 P3/S3 |
| QF | Reactive power factor $\sin \varphi=\mathrm{Q} / \mathrm{S}$ |
| QF1 | Reactive power factor phase 1 Q1/S1 |
| QF2 | Reactive power factor phase 2 Q2/S2 |
| QF3 | Reactive power factor phase 3 Q3/S3 |
| LF | Power factor of the system $L F=\operatorname{sgnQ} \cdot(1-\|P F\|)$ |
| LF1 | Power factor phase 1 <br> sgnQ1 • (1 - \|PF1 $\mid$ ) |
| LF2 | Power factor phase 2 sgnQ2 • (1 - PF2 \|) |
| LF3 | Power factor phase 3 sgnQ3 • (1 - \|PF3|) |
| c | Factor for the intrinsic error |
| R | Output load |
| Rn | Rated burden |
| H | Power supply |
| Hn | Rated value of the power supply |
| CT | c.t. ratio |
| VT | v.t. ratio |

${ }^{1}$ Maximum 264 V across the power supply when it is obtained from the measured variable with a power supply unit for $85 . . .230 \mathrm{~V}$ DC/AC and maximum 69 V with a power supply unit for $24 . . .60 \mathrm{~V}$ DC/AC.

Analog outputs $\Theta$
For the outputs $\mathrm{A}, \mathrm{B}$ and C :

| Output variable Y | Impressed <br> DC current | Impressed <br> DC voltage |
| :--- | :--- | :--- |
| Full scale Y2 | $1 \leq \mathrm{Y} 2 \leq 20 \mathrm{~mA}$ | $5 \leq \mathrm{Y} 2 \leq 10 \mathrm{~V}$ |
| Limits of output <br> signal for input <br> overload <br> and/or $\quad \mathrm{R}=0$ | $1.2 \cdot \mathrm{Y} 2$ | 40 mA |
| Rated useful range <br> of output load | 30 V | $0 \leq \frac{7.5 \mathrm{~V}}{\mathrm{Y} 2} \leq \frac{15 \mathrm{~V}}{\mathrm{Y} 2}$ |$\frac{\mathrm{Y} 2}{2 \mathrm{~mA}} \leq \frac{\mathrm{Y} 2}{1 \mathrm{~mA}} \leq \infty \quad$.

The outputs A, B and C may be either short or open-circuited. They are electrically insulated from each other and from all other circuits (floating).

All the full-scale output values can be reduced subsequently using the programming software, but a supplementary error results.

## 9. Application

System
10. Nominal input voltage, rated value

Ur =
11. Nominal input current, rated value

Ir =
12. Primary transformer
$\mathrm{V} T=\ldots \mathrm{kV}$
$C T=$ A
Specify transformer ratio primary, e.g. $33 \mathrm{kV}, 1000 \mathrm{~A}$
The secondary ratings must correspond to the rated input voltage and current specified for feature 10, respectively 11.

## Output A

Part 1 (power, power factor, frequency)
13. Measured variable Type: $\qquad$
$\qquad$ $\mathrm{X} 2=$ $\qquad$
Part 2 (current, voltage)
14. Measured variable

Type: $\qquad$ $X 0=$
X2 =
15. Output signal
16. Characteristic linear / bent
17. Limits
$X 1=$ $\qquad$ $\mathrm{Y} 1=$ $\qquad$

Output B (not used with type M561)
Part 1 (power, power factor, frequency)
18. Measured variable Type: $\qquad$

| $X 0=\square$ | $X 2=\square$ |
| :--- | :--- |
| $X 0=\square$ | $X 2=\square$ |
| $Y 0=\square$ | $Y 2=\square$ |
| $X 1=\square$ | $Y$ Y1 $=\square$ |
| Standard $/ \mathrm{Ymin}=\square$ |  |

Output C (not used with type type M561 and M562)
Part 1 (power, power factor, frequency)
23. Measured variable

Type: $\qquad$ $\mathrm{X} 2=$
Part 2 (current, voltage)
24. Measured variable

Type:
$X 0=$
X2 = $\qquad$
25. Output signal
$\mathrm{YO}=$
Y2 =
26. Characteristic linear / bent
27. Limits
$X 1=$ $\qquad$ $\mathrm{Y} 1=$ $\qquad$
Standard $/$ Ymin $=$
Ymax = $\qquad$

Order example see on next page1!

## Order example type SINEAX M563:

Codes for features 1 to 8 :

| ITEM | Description | MARKING |
| :---: | :--- | :---: |
| $\mathbf{1 .}$ | Mechanical design <br> Housing P20/105 for rail mounting | $563-4$ |
| 2. | Nominal input frequency 50 Hz | 1 |
| 3. | Power supply / Connection $85 \ldots 230 \mathrm{~V} \mathrm{DC/AC}$ | $\mathrm{Y} 2=20 \mathrm{~mA}$ |
| 4. | Output signal final value, output A | $\mathrm{Y} 2=20 \mathrm{~mA}$ |
| 5. | Output signal final value, output B | $\mathrm{Y} 2=20 \mathrm{~mA}$ |
| 6. | Output signal final value, output C | 2 |
| $\mathbf{7 .}$ | Without test records | 1 |
| 8. | Configuration, programmed to order | 1 |

Codes for features 9 to 27:
Features 9 to 27 concern data for configuring the software.
