- 64 processing channels
physical inputs or LON meter outputs can be assigned for the calculation of energy, power and costs
- Energy Control Language
for the programming of analysis, monitoring and optimization applications
- 12 universal inputs: $\pm 5 \mathrm{~mA}, \pm 20 \mathrm{~mA}, \pm 10 \mathrm{~V}, \mathrm{~S} 0$ pulse
- LON interface for 63 LON devices
- 2 analog outputs: $\pm 20 \mathrm{~mA}$ or $\pm 10 \mathrm{~V}$
- 2 relays and 4 MOS switches for the control of external processes
- 2 RS232 interfaces ( $115 \mathrm{kBit} / \mathrm{s}$ )
for the connection of PC, modem, printer or radio-controlled clock
- 2 ECS LAN interfaces
for the interconnection of individual summators over large distances
- Simple software updates via serial interface (Flash)

## Applications

The U1601 summator expands the Energy Control System (ECS) to include the processing of analog values and simplifies the interconnection of energy meters via the LON bus. All electrical and non-electrical energy and energy consumption can thus be logged, visualized, optimized and billed to individual cost centers.

## Signal and Meter Inputs

A maximum of twelve analog or pulse-shaped signals can be fed into the summator, which originate from, for example, flow meters, energy meters and heat meters. Power supply to the pulse outputs is accomplished with an integrated 24 VDC auxiliary voltage supply.
Furthermore, up to 63 LON devices can be connected to the U1601 summator with the easy-to-wire, polarity-reversal-protected, electrically isolated LON interface:

- Multifunctional power meter

A2000

- Programmable multi-measuring transducer DME 400
- Electricity meters U1681, U1687, U1689, U128x W1, U138x W1, U228x W1, U238x W1 new!
- Meter reading module

U1660

- Analog input module

U1661

- Relay output module

## OCL210 by Littwin

## Analysis

64 processing channels calculate work, power or consumption with the above-mentioned, freely assignable physical inputs. These values are summated over a defined period of time at a programmed interval, and are stored together with the corresponding maximum values.

## Operation

Two electrically isolated analog outputs, four MOS switches and two relays (changeover contacts) are available for the control of external processes, which can be operated either directly via the user-specific summator background program, or via the interface at the PC. Data exchange with the PC, or remote query via modem, is accomplished with the high-speed RS232 interface ( $115 \mathrm{kBit} / \mathrm{s}$ ). A radio-controlled clock can also be connected for system time synchronization, as well as a report printer.

## Networking

Individual summators can be interconnected over large distances with the multi-master-compatible ECS LAN and thus have unrestricted access to all network user data.

## Universal Application

Thanks to integrated high-level intelligence and the systemspecific programming language, Energy Control Language (ECL), the U1601 summator is also suitable for applications outside of the Energy Control System. These include the monitoring of distant systems and machines, as well as support for service calls and maintenance work with remote querying via modem.

## Variable Installation

The compact housing and the protection type have been designed for rugged industrial use, and allow for mounting to a top-hat rail in accordance with EN 50022. It can also be wall mounted with screws or integrated into the control panel. Easy installation is facilitated through the use of plug-in screw terminals.

| P maxYear | peak value for the current year, and peak values <br> for the last 4 years |

## Technical Data

## Inputs

The 12 inputs can be individually configured with DIP switches.

| Analog Input (current) |  |
| :--- | :--- |
| Input quantity | direct current |
| Design | electrically isolated |
| Input range | $-\mathrm{X} 2 \leq \mathrm{X} \leq+\mathrm{X} 2$ |
| Upper range value X2 | $5 \mathrm{~mA} / 20 \mathrm{~mA}$ |
| Max. input current | $\leq 2.5 \mathrm{X} 2$ |
| Control limit | $\pm 1.25 \mathrm{X} 2$ |
| Input resistance |  |
| X2: 20 mA | $75 \Omega$ |
| X2: $\quad 5 \mathrm{~mA}$ | $300 \Omega$ |
| Common mode rejection | $\geq 80 \mathrm{~dB}(\leq 120 \mathrm{~Hz})$ |

| Analog Input (voltage) |  |
| :--- | :--- |
| Input quantity | direct voltage |
| Design | electrically isolated |
| Input range | $-\mathrm{X} 2 \leq \mathrm{X} \leq+\mathrm{X} 2$ |
| Upper range value X2 | 10 V |
| Max. input voltage | $\leq 30 \mathrm{~V}$ |
| Control limit | $\pm 1.25 \mathrm{X} 2$ |
| Input resistance | $118 \mathrm{k} \Omega$ |
|  |  |
| Common mode rejection | $\geq 80 \mathrm{~dB}(\leq 120 \mathrm{~Hz})$ |

## ECS ENERGY • CONTROL • SYSTEM

| Binary Input | Direct voltage (square-wave pulse, SO compatible) |
| :--- | :--- |
| Input quantity | electrically isolated |
| Design | Signal level: $\mathrm{L}: 0.5 / 1.25 / 2.5 / 3.5 \mathrm{~mA}$ |
| Operating point (adjustable) | $\leq 48 \mathrm{~V}$ |
| Max. input voltage <br> permanent <br> short-term (t $\leq 1 \mathrm{~s}$ ) <br> $\leq 60 \mathrm{~V}$ |  |
| Series resistance (internal) | $4.7 \mathrm{k} \Omega$ |
| Admissible switching elements | Semiconductor switching device, relay |
| Pulse duration $\mathrm{T}_{\text {on }}$ (adjustable) | $10 \ldots 2550 \mathrm{~ms}$ |
| Interpulse period $\mathrm{T}_{\text {off }}$ | $\geq 2 \mathrm{~ms}$ |
| Pulse frequency | $\leq 250 \mathrm{~Hz}$ |

## Outputs:

The 2 analog outputs can be individually configured with DIP switches

| Analog Output (Current) |  |
| :--- | :--- |
| Output quantity | direct current |
| Design | electrically isolated |
| Output range | $-\mathrm{Y} 2 \leq \mathrm{Y} \leq+\mathrm{Y} 2$ |
| Upper range value Y2 | 20 mA |
| Max. output voltage | $\leq 30 \mathrm{~V}$ |
| Max. output current | $\leq 25 \mathrm{~mA}$ |
| Load range | $0 \leq \underline{250 \Omega} \leq 400 \Omega$ |

| Analog Output (Voltage) |  |
| :--- | :--- |
| Output quantity | direct current |
| Design | electrically isolated |
| Output range | $-\mathrm{Y} 2 \leq \mathrm{Y} \leq+\mathrm{Y} 2$ |
| Upper range value Y2 | 10 V |
| Max. output voltage | $\leq 12.5 \mathrm{~V}$ |
| Max. output current | $\leq 40 \mathrm{~mA}$ |
| Load range | $2.5 \mathrm{k} \Omega \leq \underline{5 \mathrm{k} \Omega}<\infty$ |
| Ripple content | $0.5 \%$ |

| Switching Output (Binary) |  |
| :--- | :--- |
| Switching element | semiconductor relay |
| Design | electrically isolated, passive |
| Number | 4 |
| Switching voltage | $\leq \pm 50 \mathrm{~V}$ |
| Switching current <br> ON <br> OFF | $\leq 200 \mathrm{~mA}$ <br> $\leq 10 \mu \mathrm{~A}$ |
| Volume resistance (AC/DC) | $5 \Omega$ |

| Switching Output (Relay) |  |
| :--- | :--- |
| Switching element | relay (changeover contact) |
| Design | electrically isolated |
| Number | 2 |
| Switching voltage | $250 \mathrm{~V} \sim, 30 \mathrm{~V}=$ |
| Switching current | 8 A resistive, 3 A inductive |
| Operating cycles | $\leq 10^{5}$ |

| Power Supply to External Switching Contacts |  |
| :--- | :--- |
| Voltage U U <br> (electrically isolated) | $24 \mathrm{~V}=$ |
| Voltage tolerance | $\leq \pm 4 \%$ |
| Current (short-circuit <br> and idling-proof) | $\leq 0.15 \mathrm{~A}$ |
| Ripple content ( $\leq 100 \mathrm{kHz}$ ) | $\leq 2 \%$ |

## RS 232 Interface (PC / Printer)

| Number | 1 (channel A and channel B) |
| :--- | :--- |
| Connectors | plug connector, sub miniature D9 plug |
| Possible Connections <br> channel A | ECL, modem, terminal, radio-controlled clock |
| Possible Connections <br> channel B | ECL, printer, radio-controlled clock |
| Number of data bits | 8 |
| Transmission speed <br> COM1/COM2: | $1200 \ldots 115000$ bit/s |
| Parity | even / no check |
| Operating mode | FDX <br> Handshake Xon/Xoff or RTS / CTS |

ECS LAN Interface (Summator Interconnection) (RS 485)

| Number | 2 |
| :--- | :--- |
| Connectors | plug connector with screw terminals <br> (up to 255 users) |
| Users per segment | 16 (32 at loop resistance $<100 \Omega$ ) |
| Operating mode | multi-master, HDX or FDX |
| Data protocol | HDLC/SDLC (adapted to multi-master requirements) |
| Topology <br> (line and/or open ring) | $\leq 1200 \mathrm{~m}$ open ring <br> $\leq 100 \mathrm{~m}$ mix |
| Transmission speed <br> (hamming distance $=4)$ | $15.6 \ldots 375$ kbps |
| Status display | 2 LEDs |
| Matching resistor | can be activated |

## LON Interface (Connection of Meters)

| Number | 1 (FTT-10, twisted 2-conductor cable) |
| :--- | :--- |
| Connectors | plug connector with screw terminal <br> (up to 63 users per station) |
| Operating mode | LonTalk protocol (CSMA) |
| Cable lengths | wiring as desired $\leq 500 \mathrm{~m}$ <br> bus, terminated $\leq 2700 \mathrm{~m}$ with special cable <br> Transmission speed |
| Status display | 18 kbps |
| Bus terminating element | can be activated; $50 / 100 \Omega$ |

## Display

| Display element | graphic LCD, $128 \times 128$ (illuminated) |
| :--- | :--- |
| Format | 21 characters, 16 lines |

## Measurement Value Storage

| Storage method | consecutive |
| :--- | :--- |
| Memory depth | with 2 channels 87380 entries <br> with 64 channels 3971 entries |
| Memory life span | with back-up battery $\geq 5$ years <br> (see also auxiliary power supply - back-up battery) |
| Resetting of Meters to Zero | via PC or device keyboard |

## ECS ENERGY . CONTROL • SYSTEM

Time Generator for Date and Clock

## ECS ENERGY • CONTROL • SYSTEM

## Summator Configuration

Configuration of the U1601 summator is clearly structured. Distinction is made between 5 different configuration groups (see figure 2, SETUP PARAMETERS).
The "general" parameters apply to all of the summators, and are thus superordinate in nature, whereas the "channel specific" parameters are directly associated with each individual channel.

The configuration groups "RS 232" and "ECS LAN" apply to the serial interface (RS 232) and the ECS LAN system bus (Energy Control System Local Area Network).
A six character password protects the individual parameters against unauthorized modification.

Basic Configuration
Setup Parameters

| STATION | CHANNELS | RS-232 | ECS-LAN | LON |

## Order Information

The following applies to the selection of order numbers:

- only one designation with the same given letter may be selected
- if the capital letter in the designation is followed by zeros only, the designation need not be included in the order

## Order Example

Either the description or the designation can be entered into the order.

| Description (plain text) | Designation |  |  |  |  |
| :--- | :--- | :---: | :---: | :---: | :---: |
| U1601 Summator | with bus connector, serial interface <br> and 12 universal inputs, LON interface | U1601 |  |  |  |
| Auxiliary Voltage | DC nominal range of use 20 V ... 72 V | H2 |  |  |  |
| Operating Instructions <br> and Commands Register | English | W2 |  |  |  |

## Accessories

| Description | Designation |  |  |  |
